Skills

- **Programming Languages:** JavaScript | TypeScript | PHP | SQL | HTML | CSS
- **Backend:** Laravel | Filament | Livewire | Node.js | Express | WordPress / WooCommerce | Shopify | MySQL | PostgreSQL | MongoDB | Eloquent | Sequelize | REST APIs | Webhooks | OAuth2 | JWT
- **Frontend & Mobile:** React | Next.js | Astro | Svelte | Solid.js | React Native / Expo | Alpine.js | Tailwind CSS | Radix UI | Vite | GSAP / Motion | D3.js
- **Testing & Quality:** PHPUnit | Playwright | Jest | Supertest | PHPStan (level 8) | PHPCS | Swagger
- **Other Skills:** REST API Design | API Integration | Multi-Tenant Architecture | CI/CD (GitHub Actions) | Docker | Git / GitHub Flow | Deployment (Forge, DigitalOcean, Vercel, Netlify, EAS) | SEO | Accessibility (WCAG 2.1 AA) | UX/UI Design

Experience

Full-Stack Developer

Nordic Charge

*Copenhagen, DK
May 2025 – Present*

- Build and maintain the Partner Portal, a multi-tenant EV charging operations platform (Laravel, Filament, Livewire, MySQL) covering order pipelines, inventories, installer operations, returns, and invoicing, with serialized tracking of individual charger units.
- Led the new company website in Astro, React, TypeScript, and Tailwind CSS, deployed on Vercel with SEO-focused performance and transactional email flows.
- Shipped a React Native / Expo installer app to iOS and Android with QR and barcode scanning, real-time serial validation, and a model-specific installation wizard.
- Authored a WooCommerce plugin bridging merchant stores to our Partner API, with OAuth2 token caching, queued submission with retry and backoff.
- Integrated third-party platforms including Monta, Zaptec, EOSVolt, and Shopify, with HMAC-verified web-hook intake that creates orders automatically under per-team configuration.
- Build Git workflow improvements with staging branches auto-deployed through Forge to DigitalOcean, and added Playwright end-to-end coverage.

WordPress Developer

Lumina Marketing

*Remote
Dec 2024 – Jun 2025*

- Built and maintained custom WordPress sites for clients, creating and modifying themes and plugins and integrating third-party tools.
- Optimized performance and delivered responsive designs across the agency's client portfolio.

Frontend Web Developer (Volunteer)

Nordic Blockchain Association

*Copenhagen, DK
Sep 2024 – Present*

- Design and build the official websites for the 2025 and 2026 Nordic Blockchain conferences in Webflow, with custom JavaScript for interactive elements, contributing to over €100,000 in ticket sales.
- Take the sites from layout and responsive design through SEO and ongoing updates across the conference cycle, working with the association's organising team.

Restaurant Manager

Juju

*Copenhagen, DK
Jan 2022 – Aug 2024*

- Achieved Michelin Bib Gourmand awards in 2023 and 2024, and "Best Bistro" by Årets Ret in 2023, reflecting high standards and attention to detail. Led a team in a high-pressure, fast-paced environment, balancing creativity with precision to maintain Michelin levels.

Projects

Gunna – AI Running Coach

[Source Code](#) | [Live Website](#)

A training log that ingests Apple Watch and Garmin workouts and pairs them with an AI coach that sees your goal and full run history

- **Features:** .fit and CSV parsing into per-km splits, heart-rate zones and running-form metrics; Riegel-projected race times; streaming AI chat with summarized run context; bcrypt password hashing with JWT sessions and per-user data scoping; automatic Google Drive import.
- **Technologies:** TypeScript | Next.js (App Router) | React | PostgreSQL | Tailwind CSS | Anthropic SDK | Recharts | Garmin FIT SDK | Google Drive API

Products Manager Software

[Source Code](#) | [Live Website](#)

A robust application for managing products efficiently, combining a powerful backend with an intuitive frontend

- **Features:** CRUD operations, validation, logging, API documentation, and comprehensive testing.
- **Technologies:** TypeScript | React | Node.js | Express | PostgreSQL | Tailwind CSS | Sequelize | Swagger | Jest | Supertest

Personal Portfolio Website

[Source Code](#) | [Live Website](#)

A statically generated portfolio and blog showcasing projects, with a focus on performance and modern animation

- **Features:** Bento-box one-page design, fully responsive. Multi-framework component islands, MDX blog with RSS and sitemap, scroll-driven and data-driven animations.
- **Technologies:** TypeScript | Astro 5 | Solid.js | Svelte 5 | UnoCSS | GSAP | Motion | D3.js | Lenis

Education

Digital House

Buenos Aires, AR

Full-Stack Web Development Bootcamp

2021

- Comprehensive training in modern web development, including React, JavaScript, CSS, SQL, and more.

U.T.N

Buenos Aires, AR

Electronic Engineering

2017 – 2020

- Three years of Electronic Engineering before moving into software. The grounding in circuits, embedded systems and hardware constraints now feeds directly into my work on EV charging infrastructure, where the software has to match how the hardware actually behaves.

Hobbies & Interests

Plane Private Pilot: Trained to manage complex systems, requiring high attention to detail and adherence to protocols. Demonstrated quick decision making and adaptability under pressure, valuable in software development environments.

Marathon Runner: Finished the 2026 Copenhagen Marathon in 3:55, a goal set months out and trained for through bad weather, setbacks and slow progress. The same long-horizon discipline I bring to shipping software: commit to the target, do the unglamorous work every day, and finish what I start.
